

IRB # UC 26-2025

Perioral Lines & Wrinkles Study Starting in February

If you are between 40-80 years old and are bothered by advanced signs of skin, you may be eligible to participate in a laser research study using an FDA-cleared device designed to address signs of skin aging, lines and wrinkles around the mouth.

Are you eligible?

- Fitzpatrick Skin Type I-IV, Ages 40-80
- Must be rated between score 4 - 9 on the photographic examples below
- Must not have a compromised ability for wound healing
- Must not have had injectable soft tissue fillers within the last 12 months in the treatment area
- Must not have had another energy-based device treatment in the last 3 months

Study Requirements

- Will last approximately 8 months
- Up to two full face Ablative Resurfacing Laser Treatments will be performed with a focus on the perioral area (region around the mouth)
- A total of up to 6 visits will be scheduled
- Clinical photographs will be taken at each visit
- Additional pre and post procedure guidelines will be discussed at screening

Photographic Examples

Score: 4

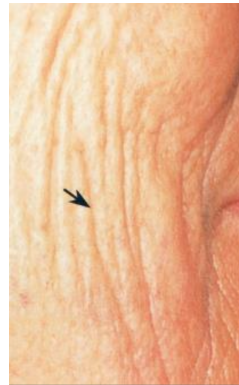

Fine to moderate deep wrinkles, moderate number of lines

Score: 6

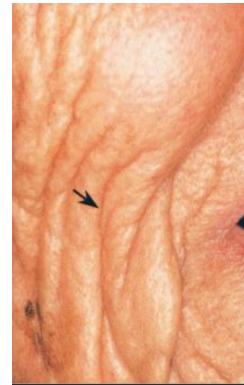

Score: 7

Fine to deep wrinkles, numerous lines with or without redundant skin folds

Score: 9
